Originality / Similarity Report

This is a real NovelCheckr report layout using a fictional manuscript. Names, sources, and scores are illustrative so you can see exactly what a paid check delivers.

Document title Rainwater Harvesting Efficiency in Semi-Arid Rajasthan	Corresponding author Ananya Sharma (sample)
File rainwater-harvesting-study.docx	Word count 4,218 words · 12 pages
Package Complete Research Package	AI-generated content Not detected

14%

OVERALL SIMILARITY INDEX

Internet sources	11%
Publications	8%
Student papers	2%
Matched sources	4 listed

Category totals can overlap when the same passage matches more than one source type. Quoted and referenced material is included in the raw index.

Matched sources

#	%	Source	Type
1	6.2%	SpringerLink — <i>Assessment of rooftop rainwater harvesting in semi-arid India</i> link.springer.com · Journal of Water Resources	Publication
2	4.1%	ScienceDirect — <i>Agricultural Water Management</i> , Vol. 248 sciencedirect.com · peer-reviewed journal	Publication
3	2.8%	Wikipedia — Rainwater harvesting en.wikipedia.org/wiki/Rainwater_harvesting	Internet
4	0.9%	Other web sources (3 minor matches under 1% each) institutional pages and news summaries	Internet

Highlighted matches from the manuscript

Colour bands match the source list above. This is the same highlighting you see in a paid NovelCheckr PDF.

Source 1 · 6.2%

"Rainwater harvesting is the collection and storage of rain from rooftops and catchment surfaces for later domestic or agricultural use."

Source 2 · 4.1%

"In semi-arid districts of Rajasthan, mean annual rainfall typically ranges between 300 and 550 mm, with high inter-annual variability."

Source 3 · 2.8%

"A typical system comprises a catchment surface, conveyance, first-flush diverter, storage tank, and a simple filtration unit."

How to read this score

A raw similarity index of 14% is generally treated as low for a research manuscript when quotations and the reference list are taken into account. Institutions set their own thresholds (often 10–20% for journal or thesis submission). This report does not decide accept or reject — it documents overlap so authors and reviewers can judge citations and paraphrase quality.
